Continuous Improvement

In Italy and all over the world, the machines and the plants that we have built have been giving our trademark the value of quality and reliability, since 1980.
We design and manufacture prototypes, serial produced machines, special machines and complete plants for industrial applications.
We adopt flexible solutions, combining working centre machines, positioning systems, assembly units and robotic cells.

Our organization and the know how we have achieved allows us to supply high standard engineering and reliable products. We pursuit customer's satisfaction, in terms of quality and delivery time, even in mass production of assembled by promoting standardization of assembly phases and tests. We invest in research to develop new ideas and solutions for the forefront of the industry.
We work together with customers coming from a wide range of industrial fields: food, packaging, white goods, automotive, glass, ceramic, hydraulic hoses, rubber belts, tyres, medical devices.
For many customers we have manufactured specific solutions and, although they might not be of common interest, they still illustrate our ability to analyze different industrial processes and meet the critical needs and demands of our customers.
